WEBSITE DEVELOPMENT

APERTURE

Process Journal

From initial concept to a community-focused storytelling website.

PREPARED BY

Colares, Ruzel John F.
Milla, Deshleen Jean L.

INSTRUCTOR

Ms. Lolita Arboleda

01 / Project Proposal

The approved Phase 1 proposal introduced APERTURE as an independent film production studio website. It planned to show film projects, explain services, and provide a way for clients and collaborators to get in touch.

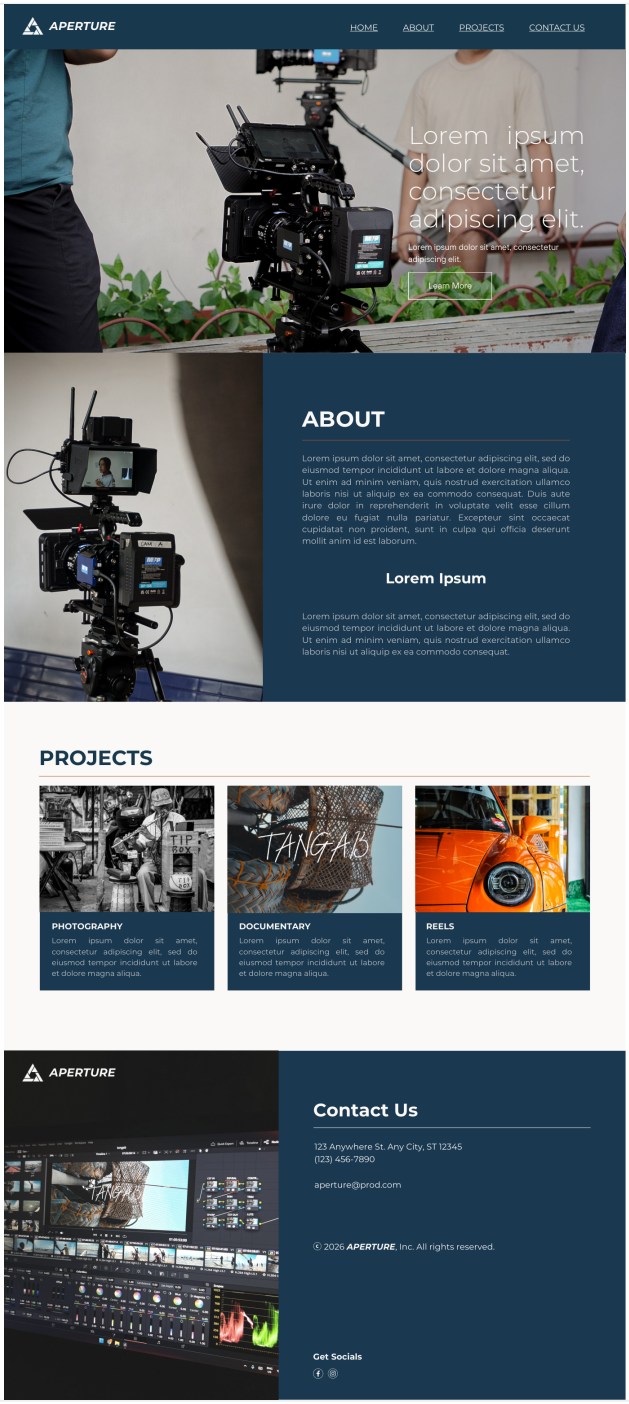

During development, the direction changed toward a community-focused platform for sharing documentaries and meaningful stories. The original proposal is included below as submitted.

Original approved project proposal · Phase 1

02 / Wireframes

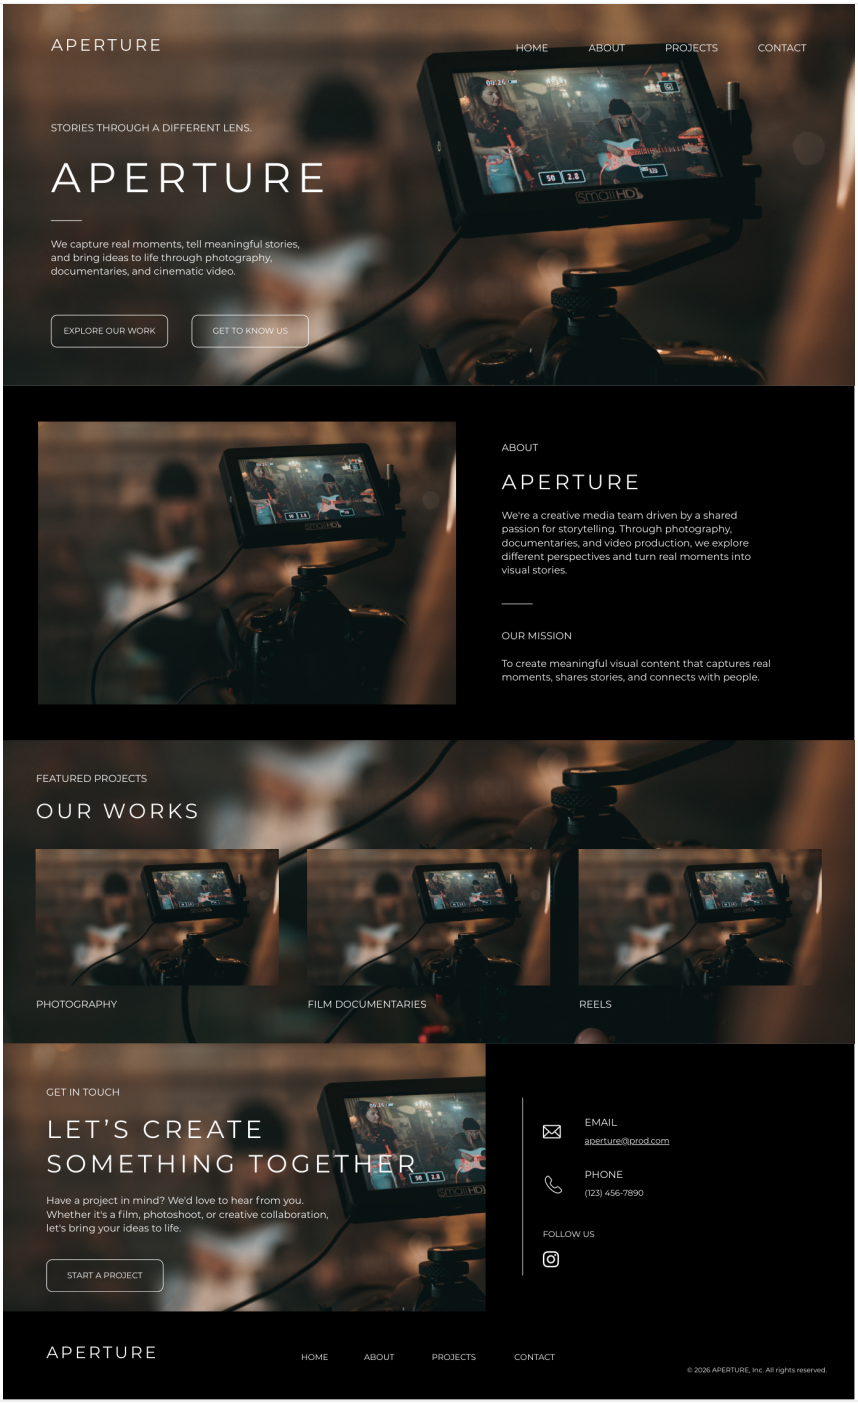

Our first wireframes planned the page structure before adding final photographs and colors. The early version focused on Home, About, Projects, Photography, Documentaries, and Reels.

Original low-fidelity wireframe · Phase 2

03 / High-Fidelity Design

We developed the wireframes into a darker, more cinematic design. This version used large headings, image spaces, and clear sections to help visitors browse the work.

High-fidelity website design · Phase 2

04 / Final Design System

The final website uses a simple monochrome interface. Photographs and documentary posters provide the main visual interest.

#000000	#171717	#333333	#D9D9D9	#FFFFFF
Black	Charcoal	Gray	Light gray	White

Layout and typography

Large headlines, short paragraphs, generous spacing, and consistent navigation create an editorial look. The final website font is recorded in its CSS; Montserrat is used throughout this process journal.

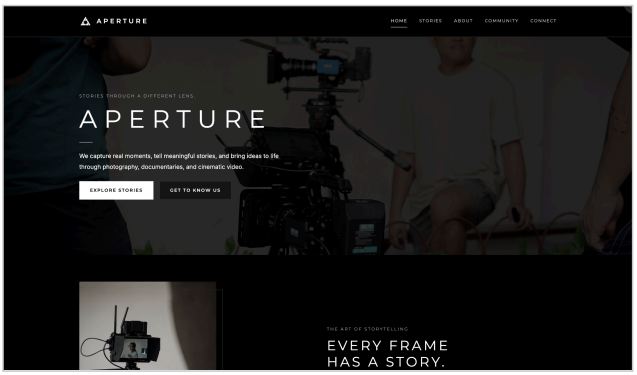

Website pages

Home · Stories · About · Community · Connect

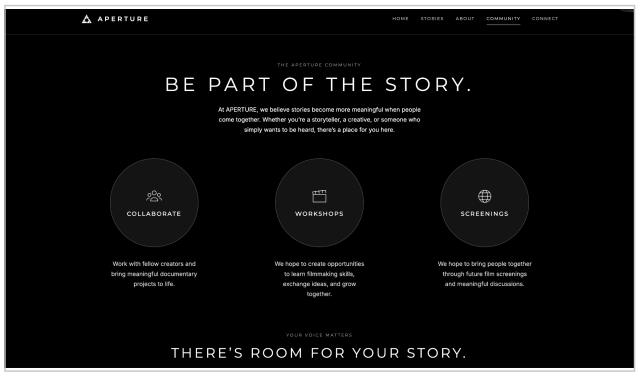

Interaction

Navigation links connect the five pages. The Connect page includes Google Forms, Facebook, email, and phone links. Community circles remain informational.

FINAL WEBSITE PREVIEW

Home page

Community page

05 / Key Revisions

01 — Website direction. We moved from the original production-studio portfolio concept to a community storytelling platform.

02 — Home page. We adjusted hero images, spacing, and documentary previews for a cleaner first impression.

03 — Stories page. We featured Karinderya ng Sentro and TANGAB and removed unfinished placeholder wording.

04 — Community page. We kept the Collaborate, Workshops, and Screenings sections and added a clear path to the Connect page.

05 — Connect page. We added story submission and collaboration forms, an official Facebook link, and contact details.

06 — Final review. We checked content consistency and prepared the website files for publishing through GitHub Pages.

06 / Website Evidence

These are original image assets taken from the submitted final website ZIP. They are not recreated browser screenshots.

Karinderya ng Sentro · featured documentary poster

TANGAB · documentary poster

Final website files

The submitted ZIP includes **index.html**, **stories.html**, **about.html**, **community.html**, **connect.html**, a shared CSS stylesheet, JavaScript, and image assets.

07 / Individual Reflection — Colares

Making our website, APERTURE, was a new experience for me. At first, I was excited because I wanted to create something related to my interests in photography and filmmaking. I also wanted our website to have a purpose, not just to show our work, but to give other people a place where they could share their stories.

One of my main contributions was working on the design, layout, and content of our website. I wanted it to look simple but still have a cinematic feel. Since our website focuses on storytelling, I decided to use black, white, and gray as our main colors. I wanted the photos and documentary posters to be the ones that caught people's attention. I also spent time thinking about how each page should look and how visitors could easily explore our website.

One of the challenges I faced was turning our ideas into an actual website. Sometimes, what I imagined didn't look the same when I saw it on the screen. There were parts where the images looked too big, the spacing felt wrong, or the layout didn't look balanced. Because of this, I had to make several changes until I was satisfied with the result. It was sometimes tiring, especially when I had to fix small details over and over again.

Another thing I realized was that our website needed to be useful, not just good-looking. This is why we improved our Community and Connect pages. We added Google Forms so people could share their stories or reach out for collaborations. We also included our Facebook page and contact details so visitors could easily connect with us.

While working on this project, I learned that making a website takes a lot of patience. I also learned that even small details can affect how people see and use a website. Most importantly, I realized that having a clear idea of what you want to create makes the whole process easier.

If I had more time, I would improve how our website looks and works on mobile devices. I would also like to add more documentaries and real stories from other people.

Overall, I am happy with how APERTURE turned out. It may not be perfect, but seeing our ideas slowly become a real website made me feel proud of what we created. This project helped me learn new things, and I know there is still a lot I can improve.

08 / Individual Reflection — Milla

Working on our APERTURE website was a fun but challenging experience for me. Before we started this project, I didn't expect that making a website would take so much time and effort. I thought that once we had our design and ideas, everything would be easier. But as we continued working, I realized that there were still many things we needed to fix and improve.

During this project, I helped with planning the website, sharing ideas, and checking the different pages. I also gave suggestions about what we could add or change to make the website better. Since APERTURE is about sharing stories through photography and documentaries, I wanted our website to be easy to understand and welcoming to visitors. I also helped review the content to make sure that the information was clear and connected to our main purpose.

One of the challenges I experienced was making decisions as a group. We had different ideas about how the website should look, so we needed to listen to each other and choose what worked best. There were also times when some parts of the website needed to be changed because they didn't look right or didn't match the other pages. It was not always easy, but I understood that making changes was part of improving our work.

I also learned how important communication is when working with other people. Sometimes, even a simple misunderstanding can slow down our progress. Because of this, I learned to be more patient, listen to other suggestions, and share my own ideas more clearly. I also realized that everyone has a different role, and even small contributions can help the whole project.

If we had more time to continue developing APERTURE, I would like to help improve the website's mobile layout and make it easier for visitors to interact with our content. I also think it would be nice to add more stories from people in our community so that our website could become more active.

Overall, this project taught me that creating a website is not just about design and coding. It is also about teamwork, creativity, and understanding what people need. I am thankful for this experience because I learned new skills and became more confident in sharing my ideas with others.
